A Wasting Fires Story.

A group of life young men lounged upon the veranda of their hotel. One of them, who was not very good-tempered, was just about to make some insulting remark about a lady who had just entered the place.

"I didn't say anything," he sputtered, "but I always sort of a ladylike nobody. The reason I don't like her is that she is so quick to take offense. You know how it is with women, they are always getting excited over nothing."

"Irene is the belle," said Mrs. Wolf. "Let us take some thought of her."

"Well, I won't argue with you," said Mary. "I have had, though, peeping from under her eyelids, gallant looks and smiles, and the most bewitching, I think, in the world." She smiled, and added, "I have a feeling that Irene is the one woman in the world who can make me forget my cares.""
A Lizard and a Lire Frog Ejected From a Human Stomach.

In a human stomach a lizard and a large frog was found in the remains of a meal. The lizard had swallowed the frog, and the frog had been digested. The stomach was removed and sent to the museum. It is a very rare occurrence to find such a case in human anatomy.

It is believed that this case was caused by the lizard swallowing the frog accidentally, and that the frog was not able to escape, but was digested by the stomach acids. The lizard was unable to digest the frog, and the frog was swallowed whole. The stomach was split open, and the lizard and frog were found inside. The lizard was very small, and the frog was much larger. The stomach was sent to the museum for study.
