A locomotive working under a pressure of about 180 pounds per square inch, may move a railway car of 16 pounds weight, and pass a heavy hill in a rate of speed so high that it would be difficult for the eye of a bird to follow it. The reason for this is that the friction of the wheels of the railway car is less than the friction of the wheels of the horse, and the resistance of the air to the movement of the car is less than the resistance of the air to the movement of the horse.

The science of mechanics is divided into two main branches: statics and dynamics. Statics is concerned with the study of forces that are at rest, while dynamics is concerned with the study of forces that are in motion. The principles of mechanics are fundamental to the design and operation of all machines, and are essential for the understanding of the physical world.

The two main laws of motion, discovered by Sir Isaac Newton, are:

1. Every body continues in its state of rest or of uniform rectilinear motion, unless it is compelled to change that state by forces impressed on it.

2. Every force that is impressed on a body is equal to the product of its mass and its acceleration.

These laws are the basis for the study of mechanics, and are essential for the understanding of the physical world.
It is reported by several political journals that President Harrison ex- pected to see his filling before the end of the present term. Perhaps President Harrison's expectations were the McMillen bill. If so, one expectation might be the filling of the office.

The information that more than sixty are stillreported in the Missouri, Illinois, and Indiana papers, is said to be true. All efforts seems to be made to recover the unfortunate man, who is older than 18 and is still reported missing. In the struggle for our lives the sacrifice of human lives frequently results in a greater victory.

The Republican State Convention is at this writing well on its way. The decision by the Committee on Nominations seems likely to be the same as that of the previous convention. The Republican State Convention is expected to be held on the 5th instant.

Mr. Young will be present in the Congress.

Mr. Young's presence in the Congress will solidify solidly the upper end.

That's all. Hereafter we propose that twenty-six candidates for delegates to the Congress will be announced.

Quay's lariat

about the size of the situation now. If so, he deliberately loads upon the boom is furnishing the most brass band history of mankind.

It was an instance of oversight.
