FARM NOTES

Increased danger of disease among hogs is noted. In fact, so great is this that the government is required to take immediate steps to prevent its spread. The disease is caused by the infection of the pigs with the agent of the swine fever, which is a highly virulent virus.

The best breeds of working and driving cattle are those that are used in the most suitable climate and under the most suitable conditions. The best grades of cattle are those that are used in the most suitable climate and under the most suitable conditions.

Business Resumed

The disastrous fire, Monday night, July 14, 1890, reduced to ashes what years ofNOTARING had assembled. There being but one of two alternatives to accept—either "throw up the sponge," or re-organize, we determined to make a fair fight. We have been enabled to re-organize our business on a more extended scale, and we are now ready to receive all orders for all kinds of work, including the construction of Wind Pumps, Tanks, the Repairing of Machinery, &c.

The THERMIRE'S and CLEANERS, stored in a cool, were moved. These superior machines, furnished to such firms at wholesale, will be sold at full price.

We have arranged to sell good house-paints at short notice and can make up a complete finishing outfit in a few hours from memory.

We hope to be able to report some progress in the near future, respectively.
