several balls. How I escaped God always wanted to know what became of all of them after the war, but she never could learn much.

That night, after the battle was over - for it lasted all day - the boys overwhelmed me with compliments.

This thrilling story comes from Alabama. In the year 1862, about the latter part of March, I, with some of my friends who were on a visit to me,

When we left the house not one of us had the least idea that the bright rays of the sun would be followed by the black wings of destruction.

I remember well, we had been playing about two or three hours. I had the ace, deuce, queen and jack of trumps.

The space above me was as dark as pitch, except when the flash of lightning made a little light, and by one of these flashes I could see old timbers, shingles, tree tops and everything imaginable flying in every direction.

I sprang to the middle of the room, clasped my friend to my breast and cried: "We are lost! Oh, God, save us!"

The words had scarcely left my lips when, oh, horrors! I saw the top of the old barn torn from its bed and hurled to destruction, folded in the arms of the mighty destroyer.

The old logs were being scattered around me. I felt the floor moving under my feet, everything turned dark, and I knew no more till I opened my eyes and found the kindly face of the doctor bending over me.

I had been hurled over a mile from the old barn, and how I got there without being killed the reader can best imagine. Three teeth knocked out, my left arm and two ribs broken were all the injuries I received.

On inquiring afterwards I found out that my friends never received a scratch. When the top of the barn was torn off they ran out in the yard and lay flat on the ground, hugging the roots of a large stump.

It has been nearly ten years since that terrible night, and I never see a cloud rise but I can almost feel myself being hurled through the air.

tears springing to her eyes. "She always wanted to know what became of all of them after the war, but she never could learn much.

"Please tell - please tell her that Ike, Yellow Ike alluz!" The girl was looking at his steadfastly through a mist of tears.

"There is nothing here fit for you, missy," he said in an undertone; "is you named for your ma?" The girl nodded.

"I thought I knowed you by the favor," he continued, and with an attempt at a smile he took himself out to a little distance, and stood waiting their call.

As the reporter was putting on his coat he heard the Southern girl say, "I suppose he would rather never have seen me at all, than to see me here like this."

A Chicago correspondent of the American Architect writes as follows: The copstone of the great Masonic Temple here in our city has been laid.

The ceremony without doubt, was interesting to the brotherhood of white-plumed knights, but to the world at large a much more interesting performance was one which took place a day later in the same structure, when a successful experiment was tried by the inventor of a pocket fire escape.

The machine which played the principal part in the experiment is a simple device. It consists of a metallic tape one-quarter of an inch wide and a thirty-second of an inch thick, running on a steel reel which is fastened to a web belt that passes around the waist.

The reel is provided with a brake whereby the person using it can control the speed of his descent. There is also an automatic brake to keep a required tension on the tape and thus prevent a sudden drop.

The end of the tape is provided with a thumb screw which can be fastened to the window sill or any object in the room. The machine in appearance is like a fisherman's reel and is about twice the size of a spool of thread.

The experiment was entirely successful, but, to say the least, decidedly ghastly at the commencement, when, after having placed the thumb screw and adjusted the webbing belt, the inventor stepped off apparently into space from the twentieth story.

He at first descended slowly, then faster and faster till it seemed as if he must have lost control over the little machine, the slender tape of which could scarcely be seen, and at any time looked no larger than an ordinary cord.

"Why, that was my mother!" "She was my young missus," said the old man.

The girl held out her hand to him. "Why, my mother always loved her old people so much," she said, the

FARM NOTES.

Small carcasses sell better than those that are extra large. The best prices are given for quality rather than for size.

As a precaution against rats in the corners, it is suggested that the outside or inside of the cribs be lined with screen wire, which is fine enough to keep out mice also.

Dairy schools are now being established in many of the Western States, and are well attended. In one such school in Iowa, there are one hundred pupils. This is an encouraging outlook for good butter in the future.

Hiram Sibley, of Rochester, N. Y., who made much of his money in early life upon a farm, once said there never was a dollar made fattening an animal. If you make any money it must be on the growth and not on fat.

Thomas Smith, of Hampton, Conn., kills ticks with snuff. He lays the sheep on its side, opens the wool, shakes the snuff on the skin in places three or four inches apart, and closes the wool, and in about three days the ticks and nits will all be dead.

A correspondent of the Journal of Agriculture selected two hogs of the same size, weight, age and thrift. To one he gave an ounce of salt daily, to the other none. The one salted had a much keener appetite than the other, and in three months weighed fifty pounds the most.

A noted Western man riding across the country and noticing thousands of acres of cornstalks standing in the fields from which the ears had been jerked, said: "The farmer is conducting the only business in the world that allows a man to lose 45 per cent. of his capital stock and at the same time live."

There are three things that our common schools should be compelled to do: First, get the young in love with land and home—make home intensely interesting that the children will prefer it to all else; second, teach them to make agriculture profitable; third, make farm life intellectually and morally on a level with the best possible life elsewhere.

A correspondent of the Maine Farmer cures colic in sheep by dissolving two tablespoonfuls of epsom salts in about a half pint of warm water, and adding one teaspoonful of essence of peppermint. Open the sheep's mouth and insert a small funnel in it. The boy pours the salts while I hold the sheep. In about two hours the sheep will be all right.

T. B. Terry says he depends on clover to keep up his farm; that he used to be too crazy after stable manure, but little by little the wonders that could be done by clover were found out. His rotation is clover one year, the first crop cut for hay, usually, and the second left on the ground until time to plow for potatoes the next Spring; potatoes the second year, followed by wheat in the Fall, without plowing the ground.

Peirce College of Business and Shorthand.

Collegeville Meat Store.

Wm. J. Thompson, BUTCHER, AND DEALER IN THE BEST—BEEF, VEAL, MUTTON.

Dr. Theel.

The farmer's troubles will not be solved until we educate our children to see and feel and understand and love the world of life that concentrates in every bit of land we cultivate.

The old Romans were level-headed and knew some things which a great many people of to-day haven't found out. Cato, the censor, said: "Our ancestors regarded it as a grand point in the husbandry not to have too much land in one farm, for they considered that more profit came from holding little and tilling it well." You see this was old in Cato's day, as he says, "Our ancestors regarded it," etc.; but it is new now.

The cow and the hen give daily returns in milk and eggs. When the crops are harvested and sold, there is an interval until the following season, but the cow and hen bring in cash every day, and at a time when everything else is at a standstill. It is the immediate returns from dairying that enables many to succeed and to avoid going into debt. The profit comes in rapidly and provides capital with which to continue.

The farmer works with nature. All of her processes are governed by laws. It is for the farmer to study out those laws, and whenever he has mastered them he has learned the right way and has only to pursue it to success. These laws are not yet all written in the books, so he who would know these things must go to the fields, the soil and the plants to gather up that knowledge which crowns his work with a liberal harvest.

Timothy seed is very small, and it is easily destroyed in the ground if covered too deeply. Early in the Spring the ground should be harrowed fine and the seed broadcasted on the surface, to be slightly brushed in. It is better to broadcast the seed if the field is expected to have an evenly-covered appearance, as drilling not only covers the seed too much but causes it to come up too thickly in some places and too sparingly in others.

The Millstone says: "The Dakotas now find themselves in the position of the land of Egypt during the seven years of plenty, when the earth brought forth by handfuls. They are suffering from a congestion of wealth. The granaries are overran, the elevators are full and the guest chamber is thrown open for a royal visitor. The farmer is enjoying the pleasant inconvenience of having more than he knows what to do with. This is a year of rewards."

Is it of any advantage to turn the cows into the woods to pick up a portion of their food, not only during the Winter, but at any season of the year? A calculation of the value of the milk produced by a cow that is given abundant pasturage and a liberal supply of grain, compared with the yield of a cow that is turned out on the abandoned field to secure what she can, will demonstrate that the well-fed cow more than pays the difference in the food received, and yields a much larger profit in proportion to cost than the other. It is unprofitable to keep any animal unless it is carefully attended to.

It is a subject for discussion whether fertilizers or manure should be used in the garden. Commercial fertilizers are free from seeds, and carry no impurities to the soil. Manure on grain, or in orchards, is serviceable with less injury than in the garden, where the crops are roots, or grow a short distance above ground. Fresh, unrotted manure is certainly very fitting material for a garden, but it is, of course, changed in composition before the plants mature. The difficulty is that manure sometimes contains matters that has been thrown on the heap from diseased persons or animals, and for that reason it is considered best to haul it to the fields than to apply it to the garden crops.

DO YOU COUGH? DON'T DELAY TAKE KEMP'S BALSAM THE BEST COUGH CURE.

STEAM HEATING!

The Superiority of STEAM in comparison with the OLD METHODS OF HEATING cannot be questioned, for twice as much heat can be obtained from the same amount of fuel than can be had from the old way of stove heating. Then another very important consideration is that all the dust and dirt, incident to burning coal, can be confined to a portion of the cellar instead of floating about all the rooms in the house. Steam Heating has come to stay. Do you wish to secure its advantages?

If you do, you are heading directly towards our line of business, and we want your order. We can supply you with just what you want, guarantee your satisfaction, and give you full worth of your money. We have placed a number of Steam Heaters and in every instance our work has proved satisfactory. Call on or address
