The mystery county, under the management of Master Michael. There are no springs in the neighborhood of Master Michael, so he made better prospects down, and he was not a little surprised to find that our Mr. M. was one of the most popular men in the county.

We were astonished, however, that Master Michael should have made better prospects down, and we were a little surprised to find that our Mr. M. was one of the most popular men in the county.

Hay Fever Sufferers

Should read our new 12-page book on the subject of Hay Fever and Asthma.

P. Harold Hayes, M. D, 201 Main St., Buffalo, N. Y.

Department of Agriculture, New York, N. Y.

ALMOST all agricultural people are long weary of the unprofitable work of trying to raise hay and grain for the cattle and horses on the farm. The expense is high, the results often not commensurate with the cost, and the labor is hard and tedious. No wonder, therefore, that the farmer often thinks of using hay and grain substitutes. But what are the best of these substitutes? What are the conditions under which they should be used? What are the possible dangers attendant upon their use? Are they adapted to the particular conditions of the farm? To the nature of the soil? To the climate of the region? These and other questions are met with in the new book by P. Harold Hayes, M. D.

The book is called "Girls' on the Farm" and is a practical and effective guide to the farmer who wants to know how to use hay and grain substitutes. It is written by a man who has had long and valuable experience in the field of agricultural research and who has a thorough knowledge of the subject.

The book is divided into two parts. The first part is devoted to the discussion of the various substitutes that are available. The second part is devoted to the practical application of these substitutes in the farm. It is a book that every farmer should read. It will help him to make the most of his land and to get the most out of his labor.
