Department of Agriculture, "Live stock."

The New York Agricultural Editors report a new method of keeping the horses healthy. It is called the "Air-Cleaner." It has been found that the air is filled with impurities and placed in a compartment with the horses. It is found that it is possible to prevent illness in the animals, while it will raise the temperature of the air and keep it in a healthy state.

The Independent does not advocate the use of such substances.

The New York Agricultural Editors also report that the "Air-Cleaner" is now being used in many parts of the country.
