Department of Agriculture.

EFFECT OF OFFICE WATER UPON STOCK.

Upset, during winter months, the offal water is the work of the winter months. The upset water contains a large amount of calcium, which is harmful to the animals. The water is made into a paste and fed to the animals daily. The paste is made by heating the water and adding a mixture of minerals. The minerals are then pressed into the water to make it suitable for the animals. The upset water is used for all purposes except for drinking. It is used for all activities except for drinking.

Estimates cheerfully furnished for the following:

John M. Latshaw, Proprietor.

- Harness Manufacturer and Trapper, PA.

- There has been a great extension in the business of Harness and Horse Shoes in recent years, and there is no doubt that the demand for good quality harness and shoes will continue to increase.

- The best evidence of public confidence in a process is the approval of those who use it.

- The success of this process is due to the fact that it is a simple and easy method of cutting and finishing leather, and that it is suitable for all kinds of leather, from the finest to the coarsest.

- It gives a smooth, even surface, and a uniform thickness, and it is durable and strong.

- The products of this process are highly valued by manufacturers and dealers, and they are in great demand.

- The process is also recommended for the cutting of leather for shoes, boots, and other articles, and for the cutting of leather for making repairs.

- The process is also used for the cutting of leather for the manufacture of gloves, and for the cutting of leather for the manufacture of bags, boxes, and other articles.
