**Fraternities Select Homecoming Candidates; Students Will Vote For Favorites Today**

By GARY GRIFFITH

Homecoming at Ursinus is October 27th. Many activities and special presentations will take place. At 10:00 a.m. a women's field hockey game is scheduled at 11:00 a.m. The Bear soccer team will meet the Todd, 2 p.m. The game should certainly be exciting. When the cheerleaders will have a half-time show and lunch will be served in the Women's dining room. Following the noon meal the dedication of the Eleanor Frost detail portrait will take place at 12:30 p.m.

At 2:00 p.m. the UC Bear football team meets undefeated Widener College on Patterson Field. The week's preparation is directed toward the Homecoming Queen will take place. This year there are five nominees for Homecoming Queen: Renee Cronin, Pamela Poole, Deborah Rahn, Diane Cornish, and Holly Leber.

Alfred Cronin portrays Sigma Lambda Fraternity. He is a senior French major from Trenton, New Jersey and is 21 years old. Renee has attended school in France and she is a member of the La Cercle Fransais here at Ursinus College. He is an active member in Omega Chi society and she has appeared in the past in Travels IV and V.

Beta Chi Fraternity is represented by Pamela Poole. Pam is a political Science major from West Chester, Pa. She is secretary of the junior class and she is recording secretary in her sorority, Omega Chi. Pam has participated in hockey and swimming while an undergraduate as well as participating as an active member in the Miss America pageant. She is petite, has black hair, and is a member of the Alpha Sigma Alpha sorority and the Chemistry Department.

Diane Cornish is the chair of the library as a social gathering place. She is a senior Political Science major from Norristown, Pa. She is 21 years old and she is a member of Phi Alpha sorority, of which she is the acting social chairman.

Holly Leber, from Ellensburg, Pa. is a member of Delta Mu Sigma. Holly is 21 years old and is majoring in English. She is an active member of Phi Alpha Sorority. As well, Holly has served as secretary and is now serving a term as treasurer for Phi Delta T. She is president of Alpha Phi Omega and she has participated in Miss America and Travels IV.

Congratulations and best of luck to each of the candidates from (Continued on Page 4, Col. 4)

**Longer Hours Suggested For Noisy Myrin Library**

By DAVE OCHOCKI

The present case at recent U.S.G.A. meetings by the Open Door. The issue has forced professors concerning academic management to take a back seat. However, one very important topic was discussed at the meeting of Oct. 16. Men's Vice-President Goof Higgins initiated a discussion on the Myrin Library. Anyone who uses the library is now aware of the fact that the atmosphere inside the library has become more academic improvement. In other words it is too noisy.

Dr. Paul McGarrity, (or anyone in charge of that matter) is not capable of assuming all of the blame. The library has not been prodded to make any changes, but perhaps it is also true that people are not afraid to make noise when they are in the library. The library is not as peaceful as it once was, and that is a fact.

Many people who go over to the library right after dinner usually take a study break around 9:00 p.m. Unfortunately enough people do not turn the place into a zoo after hours. The U.S.G.A. is exploring the possibility of having the library opened for an extra hour and a half until midnight every evening on Sunday through Thursday. This would not only allow for more study time but would also serve to spread out the "break hour" and make it less noticeable.

The U.S.G.A. is hopeful that this proposal will help stimulate more student action on academic libraries across campus as well as social ones. Student government should be concerned with both and should never shift toward one direction so far as to lose sight of the other. So if you have any complaints or suggestions about any facet of Urnum attend the next student government meeting this Monday at 6:45 p.m. in the Union.

**Chemistry Department Gets $3,000 Grant**

By RUTH VON KUMMER

In the past years, Ursinus College and the Merck Company Foundation have maintained a relationship of mutual adoration and improvement. They have engaged in a variety of activities, with the most recent being a matching in March of nineteen seventy with a three year grant of one thousand dollars per year for chemistry department, headed by Dr. Roger P. Shannon.

At that time, the Merck Company Foundation initiated a novel program whereby they would give grants to support and enhance "the educational activities of chemistry departments." By doing this, the company felt they would be aiding in the training of future chemists.

We were very appreciative of their faith in us, and since then we have kept up a constant connection with the Foundation. The first year of the program, along with the National Science Foundation Instrumental Equipment grant, which we had competed for and were awarded in 1969, provided in a variety of contacts with us chemists.

Some members of our research staff were employed as partial payment for a Nuclear Magnetic Resonance Spectrometer costing under $50,000.00, a tool that broadened our instructional and undergraduate research opportunities.

In addition to that grant, we have participated in their yearly Maryk Index Award, a competition for colleges and universities in the field of Chemistry. Their nearby West Point Research Laboratories have given us thousands of expendable equipment, due to Mr. Paul McGarrity.

We, in turn, have submitted many organic research samples for biological testing, a program head- ed by Dr. Norman Brink who is their director of University Relations.

Finally, members of our alumni have been employed by the Merck Company as chemists and employees in the area of medical research. These opportunities are enrolled in Ursinus Chemistry classes, writing an event in the school.

These relations are examples of the past alliance between the Ursinus Chemistry Department and the Foundation. We have recently awarded another three year grant to Chemistry department completely without solicitation. This grant, ranging from $2,000.00 to $4,000.00 per year, is the same as the former one: no restrictions, no strings, all we ask is that we not re- ceive to improve our department's educational organization.

We have been fortunate in our knowing and exchanging of talents with the Merck Company Foundation. In their continued generosity has provided us with substantial improvements, and this second grant will, hopefully, give us a chance to again demonstrate their faith in Ursinus.

**Ursinus Will Make Record Books With Giant Banana Split**

By WENDY BARNES

Do you often feel that Ursinus College is at a standoff? Have you failed to accomplish anything? If so, take heart, things are looking up. On November 9th, the Ursinus students are going to attempt to break the Guinness Book of World Records. Since you are all invited to attend and take a study break around 9:00 p.m. in the library, the longest banana split the world has ever seen.

The average split will be 600 feet in length and almost everything will contain is being donated. Nelson D'Arca, current world record holder, is donating 150 gallons of ice cream; Harold Steven Ci of Ar- stown, 2 gallons of cherries; Dr. Theodore & Sons, Inc. 300 bananas and the New York Extract Company is donating 30 cups of chocolate, pineapple and butterscotch toppings. It will be built on the Girls' practice field.

As you can tell, the cooling system for the banana split is being taken care of by Dr. W. G. Helmer. Clllverville is now the holder of the record; their banana split was 917 ft. 9 in. long. Since the students are determined and when the world record is broken, Ursinus will become world famous.

Next week there will be sign-up sheets for either building the banana split, or setting up and enjoying a foot of this original structure.

**Chemistry Department Begins Work: Ken-Crest Center Will Be First Effort**

By TED BURDUMY

Amidst the pervading boredom that results from routine academic or extracurricular activity, there is now an opportunity for students to extend their experiences through a more rewarding activity than dancing and beer.

This opportunity is now being provided through the Ursinus Volunteer Service Program (U.V.S.P.). The U.V.S.P. was concept, little over a year ago, but through the efforts of faculty advisors Drs. R. E. Hess and Dick Visser, along with the work of students Sarah Sellers and Kevin O'Connell, the U.V.S.P. now has an office, room 19 in the Student Union, and is trying to begin its first project, a volunteer service force to work at Ken-Crest Centers, specifically the Montgomery County route 250, which is a residential school for the mentally retarded.

Ken-Crest is a new institution, but it has been aiding only the mentally retarded. Ken-Crest is about a five minute drive from Ursinus and at present none of the students are involved with Ken-Crest, although this was the original effort from the college. In order to demonstrate the concept of "humanization" or "humanization" of the retarded, and innovative techniques are employed to these ends. There are more sales than females at Ken-Crest, and the children range in ages from six to twenty years. There are thirty-four children on the grounds of the school, and they are of all different levels of retardation, although none of the children are physically handicapped.

Student volunteers are greatly needed. For example, the administrators of Ken-Crest have expressed an interest in having students help lead the children in play and athletic exercises. Ken-Crest par- ticipants are also interested in other activities, an athletic context for the handicapped that patterns itself after a drawing board of ideas (after all for the visually impaired) is needed for one-on-one basis working with the children for P.E. majors.

An orientation program is provided for volunteers, and the next (Continued on Page 4, Col. 4)

Minority Student Speaks Out

On Biological Overpopulation

Ursinus College is an independent, four-year liberal arts college with a tradition of academic excellence, as the opening statement in the Ursinus College Bulletin. During its first one hundred and four years of operation, Ursinus has concentrated its effort especially in the field of biology. This fact was startlingly brought home to me when I viewed a report on the break-down of majors for the various classes. Of the three hundred and thirty-one students at the college, forty-five students came to Ursinus because of their interest in biology, and in going on to medical school. It is certainly flattering to the Biology Department that so many students are attracted by the major.

Yet, this statistic leaves me rather apprehensive. The class of '77 represents the culmination of an ever-increasing trend toward the domination of scientific studies at Ursinus. With a great boost given by the freshman class, more than one quarter of the total student enrollment at the college is now majoring in Biology. This is an alarming high percentage. Therefore, such departments as Anthropology, German, History, Health and Physical Education, Mathematics, Philosophy and Religion, Political Science, and Romance Languages Departments. These changes in the distribution of majors reflect the increasing imbalance between the sciences and the humanities.

As an English major who is greatly concerned with obtaining a well rounded liberal arts education, I cannot accept a quota system. I believe that the variety of the description of Ursinus presented in the Bulletin. Why would a liberal arts college accept nearly forty percent of its incoming freshman class from one field? This is a problem which the entire College Office should take into consideration. I'm one major field of concentration offered at Ursinus. With the increases in the number of Biology, Chemistry, and Physics majors, there is more than likely to be a corresponding decrease in the number of students majoring in English, History, German, History, Health and Physical Education, Mathematics, Philosophy and Religion, Political Science, and Romance Languages Departments. These changes in the distribution of majors reflect the increasing imbalance between the sciences and the humanities.

To illustrate my thesis, let us examine the integrated core curriculum at Ursinus. The requirement for the Program is as follows: one hundred and seventy students participating in the program this year. In order to accommodate all of these students, the number of Physics labs was increased. In order to accommodate all of these students, the number of Physics labs was increased. The problem is that biology majors, there are approximately one quarter of the total student enrollment at the college is much chance to talk with students, especially in the field of biology. This fact was startlingly brought home to me when I viewed a report on the break-down of majors for the various classes. Of the three hundred and thirty-one students at the college, forty-five students came to Ursinus because of their interest in biology, and in going on to medical school. Lord Caradon, U. N. Representative, Speaks On "Obligation of Optimism"

By RICHARD WHALEY

Though the U. N. and the United Nations have been given the honor of hearing speeches from many distinguished leaders, the keynote of the address by Lord Caradon of Jamaica is "Examination of the Obligation of Optimism." Lord Caradon has the honor of being a representative of the British government to the United Nations for the last 25 years. He also served as ambassador to the United Nations for Jamaica. Lord Caradon's address is needed by everyone.

Lord Caradon feels that the U. N. has not been able to work effectively because of the influence of some "corporate" attitude. He feels that there must be a personal contact among the U. N. representatives. This is the only way to make smooth out rough areas of conflict in the efficient running of an international process itself.

Even though he is a "leading authority in international relations," he has not given up his belief that the world is capable of problems that we can work on with the idea that the better we understand the people one is there, the more apparent the need for cooperation of the whole world, not just to the borders of one's own country. In this speech he points out that there is no personal contact among the U. N. representatives, which is why we cannot look forward to a peaceful future.

Lord Caradon pointed out that the individual or group can change the world today. Not only is it the responsibility of the workers to change the world, but it is also their responsibility to answer to every problem and even the changing of people. Eventually, Lord Caradon feels that the world must learn to cooperate and be able to work together in order to have a peaceful future.

The Placement Office is also a place to be utilized by all students at any time in their career. There are both desk and booklets and information periodical materials kept in the Placement Office for students to discuss their vocational plans with alumnae in a variety of occupational fields. This is an important feature of the Placement Office's services. The Office provides career guidance to students who are interested in a particular field. The Office has kept the low standard of living in the Mid-East and tries to stop all forms of opposition. He feels that the people of the Mid-East are so terrifying and dangerous that they cannot begin to be satisfied with such a situation. He believes that there is a need for cooperation and understanding on both sides.

The aim of international affairs should not be victory, but success. This is seen in situations where both sides have agreed to a new initiative, but both would accept it if it would bring about success. The aim of international affairs is the peace of the world.

Lord Caradon feels that some possible solutions in the Mid-East must be done under international mediation with an impartial chairman and then begin.

Lord Caradon has recently gone to a conference for population control. For the first time the Chinese have shown an interest in the Mid-East. This is an important step in this conference. He has experienced many different forms of living and has seen the need for cooperation and understanding between the two sides. The prospects of the disaster are so terrifying and dangerous that someone should see that we must all make a decision.

Lord Caradon believes that possible negotiations in the Mid-East must be done under international mediation, with an impartial chairman and then begin.

By EVA MORGAN

October 16th, Ursinus College met Penn State at home. Varsity played hard and strong against the fast, Penn State defenses. The first half of the game, one, played a good defensive game for the Bears, but unfortunately the Bears were down several goals. The second half, however, the Bears fought back and managed to keep the score close. The final score was 6-5. It was an overall hard fought game for both teams.

By GARY GRIFFITH

Last weekend the soccer team just a tough one to nothing decision to Swarthmore in the second half and Villeranova University one to one. On October 15th Swarthmore de-

ated U.C. 1-0. The Bear offense, with the exception of Bobby Lay's hat trick, was non-existent and the control drives, was virtually halted by the Bears. The Bears could manage only seven shots because they could not delivered successfully by the Gurnet bear goal. The overall goal was registered by Swarthmore in the first half and only the play of the its score. Therefore, the Bears should have been able to score more.
